ABOUT HYTORC

HYTORC®

HYTORC, Division UNEX Corporation
333 Route 17N, Mahwah, NJ 07430, USA
Tel: (201) 512-9500 Fax: (201) 512-9615
Email: info@hytorc.com

TO WHOM IT MAY CONCERN

This is to certify that we at HYTORC, an ISO 9001 certified USA manufacturer of high quality tools for professional use, do hereby confirm:

HYTORC VIET NAM COMPANY LIMITED

Add: D01, Tan Thuan Rd, Tan Thuan EPZ, Tan Thuan Dong Ward, Dist 7, HCMC

Tel/Fax: +028 36 208305/07

Website: <https://hytorc.com/hytorc-locations>

is our authorized branch company in VIETNAM, and only they can market and sell HYTORC tools in VIETNAM, as well as give HYTORC's global after-sales & service to customer.

Thank you,

Tom Evans

Customer Support Manager

HYTORC

ABOUT HYTORC

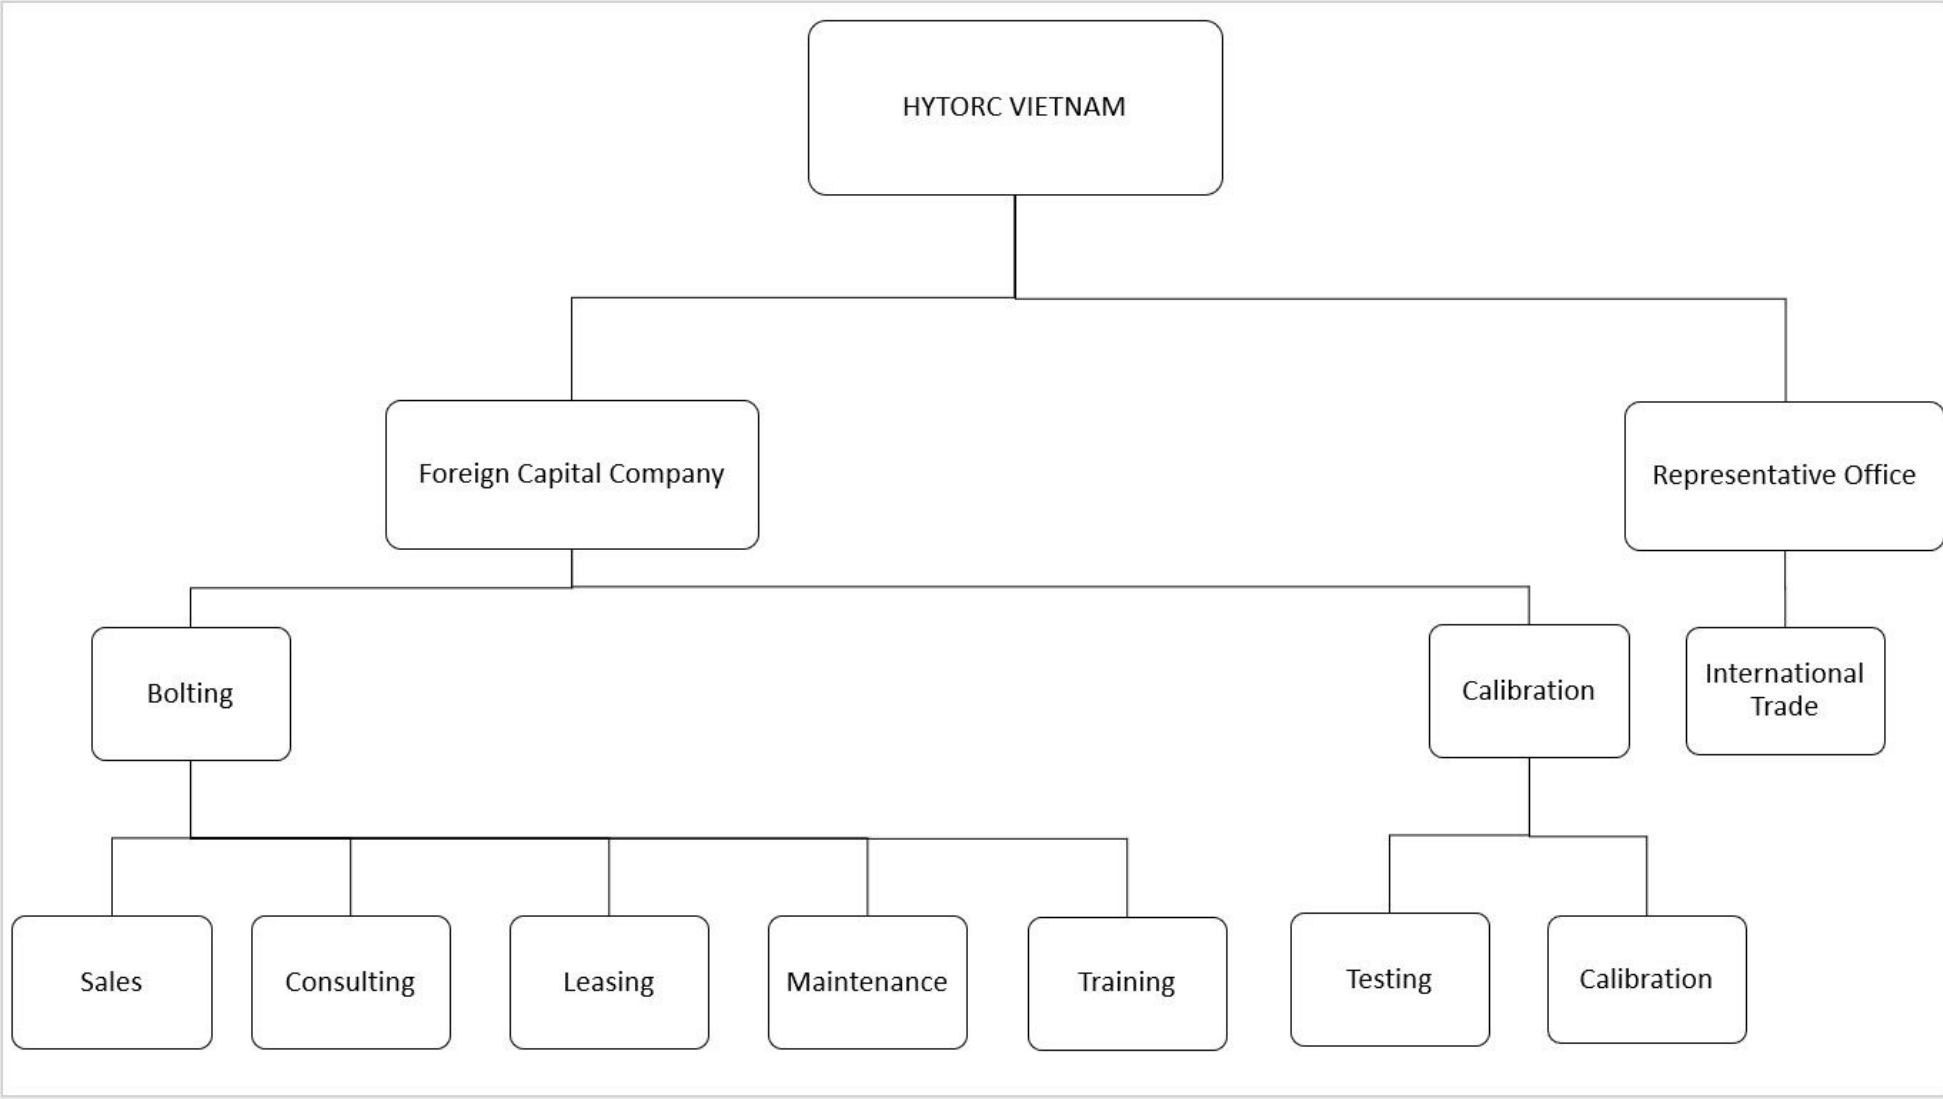

HYTORC VIETNAM CO, LTD established in 2016 by Mr. Bruce Wu as a 100% foreign capital company approved by the Vietnamese government. Provide professional services such as sales, leasing, bolting solutions, maintenance, and training program.

HYTORC products have been widely used in heavy industrial industries : oil refining, power generation, petrochemical, steelmaking, shipbuilding, chemical, machinery, cement, mining, etc., and have been highly evaluated.

With 50 years of engineering fastening experience, we insist on providing safe, reliable and fast bolting technology for the industry to solve the problems of bolt loosening and flange leakage.

Uphold the core values of integrity, dedication, innovation, and win-win business.

Solution provide

HYTORC SERVICES

Warranty & Repair & Calibration service

Warranty & Repair policy:

- 12 Months warranty on Electric Tools, Hydraulic and Pneumatic Tools.
- 3 Months warranty on all out of warranty service work.
- If the repair time is more than 2 working days, Hytorc will provide the same specifications products.
- No cost annual tool inspection.
- No cost upgrades during the lifetime of the tool.
- No cost first use half day supervision.
- No cost semi-annual user safety training.
- No cost bolting optimization consultation to improve job safety, quality, schedule.
- No cost product demonstration.

Calibration service:

- Hydraulic Torque Wrench Calibration Services at Hytorc VN officice
- For improved productivity, inventory management and operator safety, HYTORC mobile service technicians provide repairs, test and training at your location.

Hydraulic Torque Tool Technology

PUSH – ADVANCE – CLICK – RELEASE – Tool Drive Turns 24 degrees

PUSH

Pushing the advance button on the remote switches a solenoid valve on the pump and directs hydraulic fluid pressure into the advance side of the tool cylinder.

ADVANCE

Piston in the tool cylinder advances to turn the ratchet 24 degrees/click.
(some tool ratchets are different, the STEALTH turns 18 degrees/click)

CLICK

Ratchet locks in place against a pawl with a distinct clicking sound.

RELEASE - RETRACT

Releasing the advance button causes the solenoid valve to direct pressure in the release port to retract the piston.

REPEAT

This sequence is repeated until tool stalls at the desired pressure – nut stops turning.

Target torque value is set by adjusting the pump pressure.

MAIN SCOPE:

- ❖ Latest technology tensioners and equipment
- ❖ Design, calculations and analysis
- ❖ Training and repair service

MAIN CONTENTS

STRETCH TO LOAD TECHNOLOGY

STRETCH TO LOAD TECHNOLOGY

THE HYTORC WASHER SYSTEM

DIRECTIONAL FORCES

USING A STANDARD REACTION FIXTURE

When the reaction fixture abuts away from the bolt's center axis, side loads and bending forces are applied to the bolt.

HYTORC WASHER WITH BACKUP WASHER

The HYTORC Washer enables coaxial bolting using a double drive socket. Action and reaction occur on the bolt's center axis.

STRETCH TO LOAD TECHNOLOGY

THE HYTORC WASHER SYSTEM

HYTORC WASHER SYSTEM

ACTIVE SIDE

The HYTORC WASHER starts the process improvement under the nut that the torque wrench is turning. Standard hydraulic, electric and air-powered torque tools need a reaction arm to abut against a fixed point. The HYTORC WASHER becomes the reaction point and eliminates the risk of hand injuries.

The HYTORC WASHER is simple and easy to use. Like every other hardened steel washer, the HYTORC Washer prevents flange surface damage and eliminates variables in friction by making the turning surface uniform across the flange.

PASSIVE SIDE

On the side opposite of the nut being turned there is often a counter nut. To prevent rotation with the bolt, this nut needs to be kept stationary by a backup wrench that abuts against a solid object. HYTORC continues the process improvement with the BACKUP WASHER, which eliminates the use of a backup wrench.

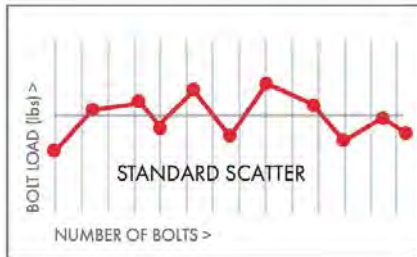

Backup wrenches add dangerous pinch points to the job; they are also inconvenient and time consuming. The BACKUP WASHER is an inexpensive alternative that can provide major improvements in safety and speed, usually leading to a return on investment after the first use.

The HYTORC WASHER SYSTEM consists of the HYTORC WASHER combined with the BACKUP WASHER. Both washers can also be used independently. Bolting has never been this safe!

STRETCH TO LOAD TECHNOLOGY

THE HYTORC WASHER SYSTEM

CONVENTIONAL METHOD

HYTORC WASHER SYSTEM

SAFETY

No pinch hazard.
Intuitive operation.
Less personnel.

EQUAL BOLT LOAD

The coefficient of friction and thus the bolt load, depends on many factors. With the WASHER SYSTEM the scatter in bolt load is cut in half.

DURABILITY

Through-hardened washers reduce surface pressure, resulting in decreased relaxation. This keeps bolt load intact over time.

ECONOMICAL

By eliminating damaging side loads and bending forces, nuts and bolts can be reused more often and flange longevity is increased.

STRETCH TO LOAD TECHNOLOGY

THE HYTORC WASHER SYSTEM

CONVENTIONAL METHOD

LEAKAGE

Even and accurate bolt load applies even pressure to the gasket, improving joint integrity and reducing the chance of leakage.

HYTORC WASHER SYSTEM

SPEED

Job time is reduced through intuitive processes and the elimination of time consuming tasks like setting up reaction fixtures and removing backup wrenches by hammer.

FLANGE SURFACE

The HYTORC Washer protects the flange surface, eliminating the need for expensive flange resurfacing processes.

WASHER

For a complete solution, choose the HYTORC WASHER SYSTEM.
